

Timberland live with KSD Software

Facilitates timely and efficient trade, compliant with Customs and government regulations in 35 countries

Zeewolde, Netherlands, July 2009

KSD Software BV, leading developer and supplier of customs solutions for mid-sized and large international enterprises, today announces that The Timberland Company has successfully implemented KSD Software Customs WorldWide.

Timberland designs, engineers, markets, distributes and sells premium quality footwear, apparel and accessories. Their European distribution center, located in Enschede (NL), ships goods to 35 countries including Europe, Scandinavia, Benelux, the Middle East and South Africa.

Timberland wanted a stable Customs software solution that ensured compliance with all applicable Customs regulations. Because these regulations can change frequently and because they are issued in different languages, it can be challenging to keep up with the requirements. KSD was able to provide a solution.

KSD Software was selected out of 4 providers. Paula Degenaaars, senior manager global trade compliance at Timberland: "The KSD product far exceeded my expectations and the KSD team was fantastic to work with. Besides our goals to continue our operations while maintaining stability, we have achieved operational efficiencies via the black-box setup and better data integrity. This resulted in an exception based software system."

About KSD Software BV

KSD Software BV is a leading developer and supplier in Customs solutions for mid-sized and large international enterprises. The company was founded in 1976 and is headquartered in Oslo, Norway. KSD's solutions help companies to streamline their business and to accomplish efficiency improvements within their internal and external supply chain. KSD has two industry specific solutions; Customs WorldWide (focused on Customs) and Transport Logistics Administration (focused on external logistics). Currently over 1700 companies in more than 20 countries are using KSD software.
